Measurement Verification Page

Note: Comments apply to all pages

This a single story building about 15' tall yet appears to be casting a shadow the same length as building "B".

Seems unlikely that this little building is the same height as the five story building "B".

East side of this roof would be in shadow. "on face" is not checked in the tool.

This would not be a straight line. Building "A" appears to be modeled significantly too tall.

Avalon Hingham Shipyard II

Hingham, MA
